ABOUT ME

Working as a Full Stack developer, I have solid skills in JavaScript, TypeScript, Java and NodeJS. In my professional experiences I participated in several projects involving the development of web and desktop applications with a focus on software for managing people and processes. In addition to professional experiences, I am passionate about technology and have been developing applications for almost 4 years, always looking to improve my knowledge and learn new technologies.

EXPERIENCE

Dev Full Stack Jr - Oxen Sistemas

01/2023 - Currently

As a junior developer, my responsibilities include implementing new routines in web applications using Typescript and ReactJS while following the best development and architecture practices. Additionally, I develop applications using Java Swing and NodeJS, and I work daily with MySQL and other relational databases. In terms of planning, I participate in daily planning meetings and project discussions, actively contributing to the success of the team.

Internship - Dev Full Stack | Datamais

7 months

During this experience I had the opportunity to participate in daily project planning and discussion meetings. I was responsible for developing and maintaining web applications in ReactJS and typescript, following the best development practices and software architecture. In addition, I implemented new routines using PHP and Python storing data in MySQL. I performed code versioning using GIT and learned and applied new technologies and agile development methodologies in a team.

FleetEase - Personal Project

9 months

FleetEase is a software developed for fleet management and real-time vehicle tracking using geolocation of mobile devices. The project includes a management platform developed with ReactJS, an API in Python, and a mobile app developed with Kotlin. Unfortunately, due to a lack of investment, the project was discontinued during its testing phase. Nonetheless, it was definitely a great learning experience.

IT Assistant | Mueller Fogões

18 months

Monitor and troubleshoot hardware and software problems on company computers, help install new software and equipment, provide technical support to company users, answering questions and offering solutions to technology-related problems.
